WP4 Set-up of the model database

- Main purpose is to collect input data of existing geothermal district heating systems in Poland, Hungary and Slovakia and to create database

- Database is needed for mathematical model based methodology to be developed in WP 5

- Database will consist of following types of data:
  - Parameters of geothermal resource
  - Energy balance of district heating systems
  - Parameters of heating circuits
WP4 Set-up of the model database

Activities:

- Design of the model database and research of existing datasets in Poland

- Set-up of the model database and research of existing datasets in Slovakia

- Testing of the model database and research of existing datasets in Hungary

Start date: 01.10.2020

End date: 30.06.2021

Responsible partner: SLOVGEOTERM a.s.
